

PRIORITY FREIGHT PROVIDES CRUCIAL SUPPORT FOR ROUND-THE-WORLD EV RACE

- 10 Tesla models raced around the world in 80 days
- Priority Freight sourced Boeing-767 to complete vital trans-Atlantic leg

Priority Freight has once again provided crucial support to the automotive sector. However, this time it was not supporting a supply chain but the 'Elduro80edays' challenge, an endurance race of 250,000 km by 10 electric vehicles across three continents and 20 countries.

Priority Freight was trusted to transport the entire fleet from Lisbon to Halifax in Nova Scotia, a challenge in itself that required a Boeing 767 and significant transport and customs expertise to make it happen within the timescales. As usual, Priority Freight delivered on time and in perfect condition allowing the race to continue successfully.

Priority Freight provides this type of service to its clients on a daily basis – the company completed over 100,000 expedited shipments in 2015.

Its dedication to beating deadlines and exceeding expectations has made it the contingency logistics provider of choice in the global automotive, aerospace industries.
